4.1 Annual Actuarial Valuation Cycle

The VP Pension Policy and Funding, provided a brief history of Actuarial Valuations for the Plan and outlined the LAPP Board Actuarial Valuation Policy.

The Mercer Actuary gave a presentation of the valuation results in order for the Board to review its costing method and funding assumptions to ensure the valuation will properly estimate the financial health of the Plan. She reviewed the plan statistics, assumptions and gains and losses based in experience compared to what was assumed and the actuarial cost method. She also reviewed funding results based on different discount rate sensitivities.

There was discussion about plan statistics, the unfunded liability payment rate, demographic stability, retirement age, growth in urban municipalities, aging workforce, mortality tables, the increase in utility corporations in smaller urban centres, inflation rate changes and sensitivity, COLA, smoothing, discount rates in other plans, ER contribution rates, risk vs current cost, communication, and the need to file the valuation.

MOTION AL13:07:03 The Board directs the Mercer Actuary to prepare additional valuation information with different inflation rates, while a) maintaining the current cost and smoothing methodologies, b) maintaining the existing demographic and other economic assumptions and c) maintaining the existing discount rate of 5.75%, which includes an increase in margin from 45 basis points (bps) to 65 (bps). The Board will make a decision in September regarding the Actuarial Valuation.
